

Excluding Specific Characters

[^]

The negated character class `[^]` matches any character that is *not* in the square brackets.

In the above image, the Regex Pattern is matched with the Test String.

Task

You have a test string S .

Your task is to write a regex that will match S with the following conditions:

- S must be of length `6`.
- First character should *not* be a `digit` (`1`, `2`, `3`, `4`, `5`, `6`, `7`, `8`, `9` or `0`).
- Second character should *not* be a `lowercase vowel` (`a`, `e`, `i`, `o` or `u`).
- Third character should *not* be `b`, `c`, `D` or `F`.
- Fourth character should *not* be a `whitespace character` (`\r`, `\n`, `\t`, `\f` or `<space>`).
- Fifth character should *not* be a `uppercase vowel` (`A`, `E`, `I`, `O` or `U`).
- Sixth character should *not* be a `.` or `,` symbol.

Note

This is a regex only challenge. You are not required to write any code.

You have to fill the regex pattern in the blank ().
