## Day 5: Arrow Functions

## Objective

In this challenge, we practice using arrow functions. Check the attached tutorial for more details.

## Task

Complete the function in the editor. It has one parameter: an array, nums. It must iterate through the array performing one of the following actions on each element:

- If the element is even, multiply the element by 2 .
- If the element is odd, multiply the element by 3 .

The function must then return the modified array.

## Input Format

The first line contains an integer, $n$, denoting the size of nums.
The second line contains $n$ space-separated integers describing the respective elements of $n u m s$.

## Constraints

- $1 \leq n \leq 10$
- $1 \leq n u m s_{i} \leq 100$, where $n u m s_{i}$ is the $i^{\text {th }}$ element of $n u m s$.

## Output Format

Return the modified array where every even element is doubled and every odd element is tripled.

## Sample Input 0

```
5
1 2 3 4 5
```

## Sample Output 0

```
34 9 8 15
```

## Explanation 0

Given nums $=[1,2,3,4,5]$, we modify each element so that all even elements are multiplied by 2 and all odd elements are multipled by 3 . In other words, $[1,2,3,4,5] \Rightarrow[1 \cdot 3,2 \cdot 2,3 \cdot 3,4 \cdot 2,5 \cdot 3] \Rightarrow[3,4,9,8,15]$. We then return the modified array as our answer.
