# Day 0: Data Types

HackerRank

### Objective

Today, we're discussing data types. Check out the attached tutorial for more details.

### Task

Variables named $firstInteger$, $firstDecimal$, and $firstString$ are declared for you in the editor below. You must use the $+$ operator to perform the following sequence of operations:

1. Convert $secondInteger$ to an integer (Number type), then sum it with $firstInteger$ and print the result on a new line using `console.log`.
2. Convert $secondDecimal$ to a floating-point number (Number type), then sum it with $firstDecimal$ and print the result on a new line using `console.log`.
3. Print the concatenation of $firstString$ and $secondString$ on a new line using `console.log`. Note that $firstString$ *must* be printed first.

### Input Format

| Data Type | Parameter | Description |
|---|---|---|
| `string` | $secondInteger$ | The string representation of an integer you must sum with $firstInteger$. |
| `string` | $secondDecimal$ | The string representation of a floating-point number you must sum with $firstDecimal$. |
| `string` | $secondString$ | A string of one or more space-separated words you must append to $secondString$. |

### Output Format

Print the following three lines of output:

1. On the first line, print the sum of $firstInteger$ and the integer representation of $secondInteger$.
2. On the second line, print the sum of $firstDecimal$ and the floating-point representation of $secondDecimal$.
3. On the third line, print $firstString$ concatenated with $secondString$. You must print $firstString$ before $secondString$.

### Sample Input 0

```
12
4.32
is the best place to learn and practice coding!
```

### Sample Output 0

```
16
8.32
HackerRank is the best place to learn and practice coding!
```

### Explanation 0

When we sum the integers $4$ and $12$, we get the integer $16$.
When we sum the floating-point numbers $4.0$ and $4.32$, we get $8.32$. When we concatenate `HackerRank` with `is the best place to learn and practice coding!`, we get `HackerRank is the best place to learn and practice coding!`.

**You will not pass this challenge if you attempt to assign the *Sample Case* values to your variables instead of following the instructions above.**
