Reverse a doubly linked list

This challenge is part of a tutorial track by MyCodeSchool

Given the pointer to the head node of a doubly linked list, reverse the order of the nodes in place. That is, change the next and prev pointers of the nodes so that the direction of the list is reversed. Return a reference to the head node of the reversed list.

Note: The head node might be NULL to indicate that the list is empty.

Function Description

Complete the *reverse* function in the editor below.

reverse has the following parameter(s):

DoublyLinkedListNode head: a reference to the head of a DoublyLinkedList

Returns

- DoublyLinkedListNode: a reference to the head of the reversed list

Input Format

The first line contains an integer t, the number of test cases.

Each test case is of the following format:

- The first line contains an integer n, the number of elements in the linked list.
- ullet The next n lines contain an integer each denoting an element of the linked list.

Constraints

- 1 < t < 10
- $0 \le n \le 1000$
- $0 \leq DoublyLinkedListNode.data \leq 1000$

Output Format

Return a reference to the head of your reversed list. The provided code will print the reverse array as a one line of space-separated integers for each test case.

Sample Input

3 4

Sample Output

4 3 2 1

Explanation

The initial doubly linked list is: $1\leftrightarrow 2\leftrightarrow 3\leftrightarrow 4\to NULL$

The reversed doubly linked list is: $4\leftrightarrow 3\leftrightarrow 2\leftrightarrow 1 \rightarrow NULL$
