

'Tr' Command #2

In this challenge, we practice using the *tr* command because it is a useful translation tool in Linux.

In a given fragment of text, delete all the lowercase characters *a — z*.

Input Format

A block of [ASCII](#) text.

Output Format

Delete all the lowercase characters in the given block of text.

Sample Input

```
Hello  
World  
how are you
```

Sample Output

```
H  
W
```
