# Project Euler \#124: Ordered radicals 

This problem is a programming version of Problem 124 from projecteuler.net
The radical of $n, \operatorname{rad}(n)$, is the product of the distinct prime factors of $n$. For example, $504=2^{3} \times 3^{2} \times 7$, so $\operatorname{rad}(504)=2 \times 3 \times 7=42$.

If we calculate $\operatorname{rad}(n)$ for $1 \leq n \leq 10$, then sort them on $\operatorname{rad}(n)$, and sorting on $n$ if the radical values are equal, we get:

|  | Unsorted | Sorted |  |  |
| ---: | ---: | ---: | ---: | ---: |
| $n$ | $\operatorname{rad}(n)$ | $n$ | $\operatorname{rad}(n)$ | $k$ |
| 1 | 1 | 1 | 1 | 1 |
| 2 | 2 | 2 | 2 | 2 |
| 3 | 3 | 4 | 2 | 3 |
| 4 | 2 | 8 | 2 | 4 |
| 5 | 5 | 3 | 3 | 5 |
| 6 | 6 | 9 | 3 | 6 |
| 7 | 7 | 5 | 5 | 7 |
| 8 | 2 | 6 | 6 | 8 |
| 9 | 3 | 7 | 7 | 9 |
| 10 | 10 | 10 | 10 | 10 |

Let $E(k)$ be the $k$ th element in the sorted $n$ column; for example, $E(4)=8$ and $E(6)=9$.
Given $L$ and $k$, if $\operatorname{rad}(n)$ is sorted for $1 \leq n \leq L$, find $E(k)$.

## Input Format

The first line of input contains $T$, the number of test cases.
Each test case consists of a single line containing two integers, $L$ and $k$.

## Constraints

$1 \leq T$
$1 \leq k \leq L$
For the first few test files worth $30 \%$ of the total points:
$T \leq 20$
$L \leq 200000$
For the next few test files worth $30 \%$ of the total points:
$T \leq 100000$
$L \leq 200000$

For the last few test files worth $40 \%$ of the total points:
$T \leq 20$
$L \leq 10^{18}$
$k \leq 200000$

## Output Format

For each test case, output a single line containing a single integer, the requested value $E(k)$.

## Sample Input

```
3
104
106
129
```

## Sample Output

```
8
9
12
```

## Explanation

The first two cases can be answered by consulting the table in the problem statement. For the third test case, $L=12$ so the new table is:

|  | Unsorted | Sorted |  |  |
| ---: | ---: | ---: | ---: | ---: |
| $n$ | $\operatorname{rad}(n)$ | $n$ | $\operatorname{rad}(n)$ | $k$ |
| 1 | 1 | 1 | 1 | 1 |
| 2 | 2 | 2 | 2 | 2 |
| 3 | 3 | 4 | 2 | 3 |
| 4 | 2 | 8 | 2 | 4 |
| 5 | 5 | 3 | 3 | 5 |
| 6 | 6 | 9 | 3 | 6 |
| 7 | 7 | 5 | 5 | 7 |
| 8 | 2 | 6 | 6 | 8 |
| 9 | 3 | 12 | 6 | 9 |
| 10 | 10 | 7 | 7 | 10 |
| 11 | 11 | 10 | 10 | 11 |
| 12 | 6 | 11 | 11 | 12 |

In this case, $E(9)$ is now 12 .
