

HACKERRANK INNOVATORS

HackerRank 

+

One of the world's fastest growing startups, 30 million people use Canva to create beautiful designs quickly and easily.

Canva is backed by Sequoia Capital and Blackbird Ventures.

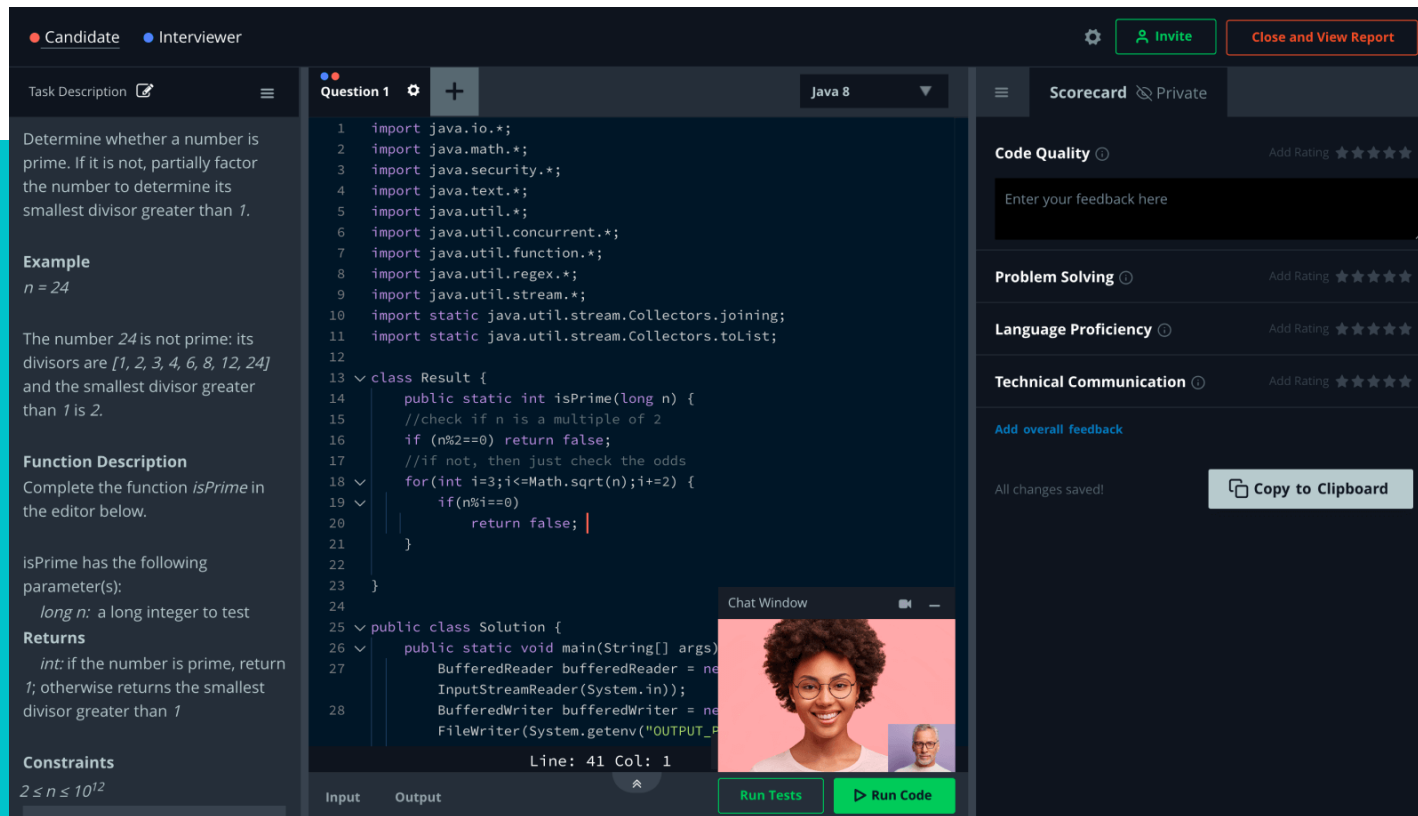

Scott Crowe
Lead Recruiter

“

HackerRank helps us design hiring experiences that developers love. Their best-in-class IDE lets candidates focus on problem solving and coding, not tedious obstacles. For a fast growing company like ours, speed and ease of use are two critical recruiting levers that HackerRank empowers us with.

The screenshot displays the HackerRank coding environment. On the left, the 'Task Description' panel contains a problem statement: 'Determine whether a number is prime. If it is not, partially factor the number to determine its smallest divisor greater than 1.' It includes an example with $n = 24$ and its divisors, a 'Function Description' for the `isPrime` method, and constraints $2 \leq n \leq 10^{12}$. The central code editor shows Java 8 code for a `Result` class with an `isPrime` method and a `Solution` class with a `main` method. A 'Chat Window' is visible at the bottom right of the editor. On the right, the 'Scorecard' panel shows a 'Private' scorecard with sections for 'Code Quality', 'Problem Solving', 'Language Proficiency', and 'Technical Communication', each with a five-star rating and an 'Add Rating' button. A 'Copy to Clipboard' button is also present.

HackerRank has helped Canva hire top talent across these roles:

- Full Stack Engineer
- Graduate Software Engineer
- Front End Web Engineer
- Senior Web Engineer

HackerRank has helped us **save** our most valuable commodity, **time** along with **cost** by pinpointing high-quality candidates and testing their coding skills before the interview process commences.

HackerRank's Developer Skills Platform has helped us identify candidates that are the best-fit based on proven skill, eliminating unconscious bias. This gives us an actionable path to building more **diverse teams.**
